Central Mobile Enclosure 900 Flex Series Serial Number Location

DRYAIR		P.O. Box 126 400 Service Road St. Brielle, SK Canada S0K 3V0		MADE IN CANADA	
DRYAIR Model:	SOSFLEX	Reference:			
Serial No.:		Prod. Sched.:			
Main Power		Oil Burner		Natural Gas Burner	
Model:	240 VCA, 50/60	Model:	Flexibo 40-F-220	Model:	Flexibo 40-C2000
Phase:	1	Fuel:	40 Heating Oil	Fuel:	Natural Gas
Vol.:	60-142	Capacity Value:	140,000 BTU / US Gal	Capacity Value:	1000 BTU/ft ³
Max. Amps:	4	Output:	200,000 BTU/h	Max. Gas Pressure:	40" W.C.
Control Voltage:	120V/60AC	Fuel Input:	6.02 US GPH	Max. Gas Pressure:	12" W.C.
Max. Output:	20A	Pump Pressure:	145 PSI	Max. Gas Pressure:	5.2" W.C.
Max. Efficiency:	88%			Max. Gas Pressure:	500,000 BTU/h
				Max. Gas Pressure:	500,000 BTU/h
Compliance to:		Clearances:			
ANSI Z21.13		Clearance:	24" (610mm) minimum	Clearance:	24" (610mm) minimum
UL		Clearance:	24" (610mm) minimum	Clearance:	24" (610mm) minimum
UL		Clearance:	24" (610mm) minimum	Clearance:	24" (610mm) minimum

MANUFACTURED BY: DRYAIR MANUFACTURING CORP.
IMPORTED BY: UPS SUPPLY CHAIN SOLUTIONS
DATE OF MANUFACTURE:
GVWR: 6350 KG (14000 LB)
GAWR FRONT: 3175 KG (7,000 LB)
TIRES: ST235/80R16 (E)
RIMS: T-16x6K
COLD TIRE INFL. SINGLE: 552kPa (80 PSI)
GAWR REAR: 3175 KG (7,000 LB)
TIRES: ST235/80R16 (E)
RIMS: T-16x6K
COLD TIRE INFL. SINGLE: 552 kPa (80PSI)
 THIS VEHICLE CONFORMS TO ALL APPLICABLE FEDERAL MOTOR VEHICLE SAFETY STANDARDS IN EFFECT ON THE DATE OF MANUFACTURE SHOWN ABOVE.
VIN: 2DRUS627 S
TYPE: TRAILER

MANUFACTURED BY/FABRIQUÉ PAR: DRYAIR MANUFACTURING CORP.
 ST. BRIEUX, SK CANADA S0K 3V0

TROUBLESHOOTING

INDICATOR LIGHTS

- There are 6 green lights on the control panel, which indicate the status of a sequence of functions while the unit is running.
- When burner is on, all green lights should be on as well. Any light, which is not on should be considered burned out.
- Aqua stat and burner light go off and on as the burner cycles.
- The terminal block located behind the control panel, must be accessed to initiate troubleshooting procedures.

No power at outgoing side of water heater toggle switch

Check for 120 V power between letter N and #1 on the terminal strip. If there is no power, check the following:

- Check that the water heater toggle switch has not been switched off.
- Check that the water heater toggle switch has not been turned off.
- Check for power in and out of breaker and toggle switch.
- Check that correct power supply has been connected to the unit. Investigate power source and be certain that the power characteristics are correct. (115/230 V, 30 amp, single phase, 4-conductor, 0-100 - 10 AWG, max 100 - 6 AWG)

No power at terminal #4 on low water cut-off

Check for 120 V power between letter N and #4 on the terminal strip. If there is no power, check the following:

- Low water situation. Check float level in tank, and add if necessary.
- Check fuse in low water cut-off. Replace if required.
- WPCO/LWCDO not working and sink tank full, call DRYAIR for further assistance.

No power at flow switch

Check for 120 V power between letter N and #4 on the terminal strip. If no power then check between N and #3 on the terminal strip. If power, check machine flow sensor if it is used in unit. New units do not have this. If there is no power, check the following:

- Pump not running - Check pump/breaser and toggle switch on control panel. - Check for 230 V at pump motor. If correct power is confirmed at motor and pump won't run, replace pump.
- Inadequate flow - Check that all valves are open in the fuel-transfer loop. - Filter screen may be plugged. Use flashlight to inspect strainer into a bucket, while pump is running for a quick flush. Eventually the system may have to be drained and the strainer removed and cleaned by hand. - If fuel-receiving units are clogged off, check that the pressure switches are clean.
- Defective flow switch - If #4 and #3 check out, the flow switch will need to be inspected or replaced.

No power at outgoing side of high-limit switches

Check for 120 V power between letter N and #4 on the terminal strip. If there is no power, check the following:

- Manual reset high-limit - Check and reset if it has tripped.
- Check switch wiring. The automatic high-limit should be set 10F higher than the set point of the aqua stat, and the manual reset high limit should be set 10F higher than the automatic high-limit switch.
- Determine which high-limit switch is defective and replace.

No power at aqua stat

Check for 120 V power between letter N and #4 on terminal strip. If there is no power, check the following:

- Check that setting on aqua stat is at desired operating temperature.
- Check aqua sensor (electronics), and verify that it is intact and connected properly in its rack.
- F#4 and #3 check out, replace both aqua stat and well sensor.

Gas Burner Sequence Only

- High and Low Gas Pressure switches - Check and reset if tripped.
- Check that inertial burner fuse is not burnt.

In Diesel/Gas units the aqua stat and burner lights will not come on if FLOW pressure switch is tripped.

Burner light and aqua stat lights work in series. If burner does not start, press reset button on burner. Check for fuel pressure during pre-purge. If no pressure, switch 2-way valve (if equipped) to purge position. May need to reset burner a couple times to purge system. Call DRYAIR for further assistance.

DÉPANNAGE

TEMOIN S'ALLUME

- Il y a 6 lampes verts sur le panneau de commande, qui indiquent état d'une séquence de fonctions tandis que l'appareil fonctionne.
- Lorsque le brûleur est allumé, tous les lampes verts doivent être allumés aussi. Tout le lampes qui est pas allumé, doit être considéré brûlé.
- La lumière d'aqua-stat et de brûleur s'éteint et s'allume alors que le brûleur cycle.
- La barre de raccordement située derrière le panneau de commande, doit être vérifiée pour initier les procédures de dépannage.

Aucune alimentation à côté sortant d'interrupteur à double de chauffe-eau

Vérifiez s'il y a 120 volts de puissance entre les lettres N et #1 sur la barre de raccordement. S'il n'y a pas de puissance, vérifiez les points suivants:

- Vérifiez que le disjoncteur n'a pas été débranché.
- Vérifiez que l'interrupteur à double de chauffe-eau n'a pas été éteint.
- Vérifiez la puissance en et hors de disjoncteur et d'interrupteur à double.
- Vérifiez que l'alimentation électrique correcte a été connectée à l'unité. Investigate le source d'alimentation et soyez certain que les caractéristiques de puissance sont correctes. (115/230 vol, 30 amp monophasé, 4-conducteur, 0-100 - 10 AWG, max 100 - 6 AWG)

Aucune alimentation à terminal #2

Vérifiez s'il y a 115 volt de puissance entre les lettres N et #2 sur la barre de raccordement. S'il n'y a pas de puissance, vérifiez les points suivants:

- Situation de bas niveau d'eau. Vérifiez niveau de carburant dans le réservoir et ajoutez si besoin.
- Vérifiez le fusible de l'interrupteur à bas niveau d'eau. Remplacez si besoin.

Aucune alimentation au commutateur de flux

Vérifiez s'il y a 115 volt de puissance entre les lettres N et #4 sur la barre de raccordement. S'il n'y a pas de puissance, vérifiez les points suivants:

- Pompe ne fonctionne pas - Vérifiez le disjoncteur de pompe et l'interrupteur à double de chauffe-eau. - Vérifiez que l'aqua-stat est connecté à l'aqua-stat et que le disjoncteur de pompe est connecté à l'aqua-stat.
- Pression insuffisante - Vérifiez que le débit de l'aqua-stat est correct. - Si le débit de l'aqua-stat est correct, vérifiez que le débit de l'aqua-stat est correct.
- Commutateur de flux défectueux - Si #4 et #3 ne marchent, le commutateur de flux doit être inspecté ou remplacé.

Flux inadéquat

Vérifiez que toutes les vannes sont ouvertes dans la boucle de transfert de fluide. Excess de Brûleur peut être branché. Utilisez la lampe de poche de votre véhicule pour inspecter le filtre dans un seau. Nettoyez le tamis de la pompe pour un flush rapide. Éventuellement le système peut avoir à être drainé et le tamis de la pompe doit être nettoyé à la main. - Si les unités de réception de fluide sont défectueuses, vérifiez que les vannes de pression sont propres et que les unités de réception de fluide sont défectueuses.

- Commutateur de flux défectueux - Si #4 et #3 ne marchent, le commutateur de flux doit être inspecté ou remplacé.
- Observez que commutateur de flux haute est défectueux, est remplacé.

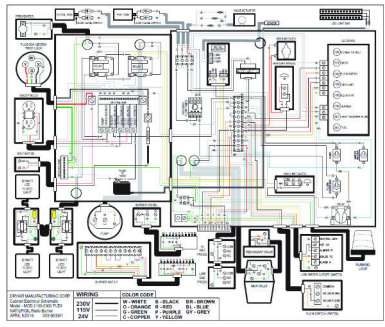

Aucune alimentation à l'aqua-stat

Vérifiez s'il y a 115 volt de puissance entre les lettres N et #4 sur la barre de raccordement. S'il n'y a pas de puissance, vérifiez les points suivants:

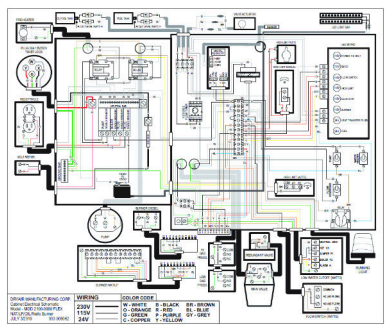

- Vérifiez que le paramètre à l'aqua-stat est à la température de fonctionnement souhaitée.
- Vérifiez le capteur de puls (électronique), et confirmez qu'il est intact et correctement positionné sur le réservoir.
- Si #4 et #3 marchent, remplacez aqua-stat et capteur de puls.
- Brûleur à Séquence Brûleur.
- Interrupteurs haute et basse pression de gaz - Vérifier et réinitialiser si défectueux.
- Vérifier que le fusible de brûleur interne ne se consume.

Burner Lockout

Upon initial startup or in the event of a low fuel or gas incident the burner may lock out. The reset button on the burner front will be glowing orange/red.

Proceed as follows:

- Ensure all fuel/gas supply valves are open and that there are no leaks.
- Inspect (if equipped) Low Gas Pressure switch and High Gas Pressure switch have been reset.
- Depress Burner reset button. Burner should run and initiate firing sequence.
- If Burner fails to light, the Burner will lockout again.

Multiple resets may be required to purge air from the fuel source.
